Product details for sceye and add-ons

sceye-presenter

Use your sceye for presentation...

You already have a projector, a notebook and a sceye? Why not using sceye also for your presentation?

With the sceye-presenter software you have the perfect complement to your powerpoint presentation.

A case from the practice:

You perfectly prepared a training course with powerpoint-sheets, well organized with a straight message. Then a request from your audience during your presentation: "I have here an example, that's something we really are worried about..."

Powerpoint sheets are perfect for a prepared training course. But sometimes you need to react spontaneous, to pick up an feedback or an idea from a listener - that's the time where you're going back to the overhead-projector.

Exactly for this case we developed sceye-presenter.

Appliance:

Just place an object, an article from a newspaper, a paper under the sceye - immediately the object appears through the projector at the wall - visible for everyone.

Use the laser to point out some details, make a note right at the paper or make a drawing to explain the background.

Zoom in or out, scroll over the paper, save the current view - and all this can be done by the same remote control you are also using for your powerpoint presentation.

Advantages:

- Prepare the always static part of your training course in powerpoint and grade up your presentation by using the sceye-presenter to pick up request from the audience dynamically and flexible.
- Control both with just one remote control - your powerpoint-sheets and your live-presentations with sceye.
- It doesn't matter if you place the object at the top, the mid or the bottom of the scanned area - the sceye-presenter is detecting the new object automatically and shows the object in the center of the screen - zoomed to the best position.
- Save any page per button on your remote control with the full resolution of sceye and send these pages by email to your audience.
- Because of the high resolution (10 times higher than ordinary camera systems) sceye offers a high sharpness and perfect readability at any zoom-level. With the remote-control you can zoom in and scroll to details from everywhere in the room.
- All functions are also assessable by the control center - a small second window which can be placed at the second screen on your laptop - just visible for the teacher.

sceye-presenter: To make YOUR presentation special!

A demo version is part of the driver installation (version 3.x).
